

Wild Animal Park Class Trip

Calvin's third graders toured the Wild Animal Park's state-of-the-art CRES (Conservation and Research for Endangered Species) center and learned about the different types of research done in the various labs. Then they got to see the various labs and the Frozen Zoo where they store frozen cells from various animals. In addition, they learned how the California condor is making a comeback after years of declining numbers. As part of that presentation, they were able to split into groups and track our own "condors" (stuffed animal condors) equipped with transmitters. Finally, they toured the Wild Animal Park.
